

FastMaint™ Maintenance Management Software from SMGlobal Inc.

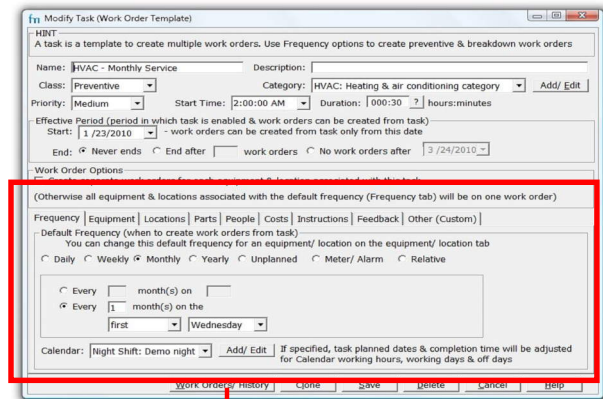

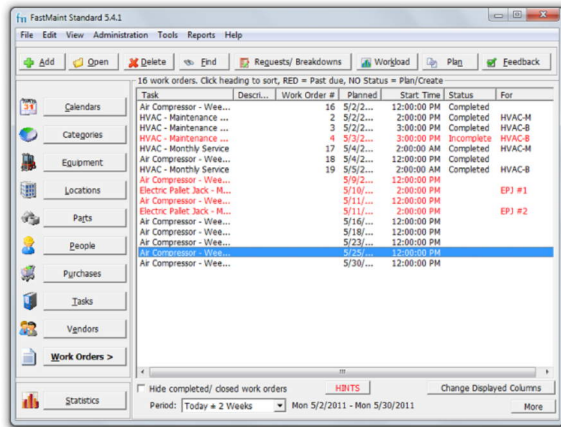

Your FAST track to maintenance management™

“What I really love about FastMaint is it's like Microsoft Outlook™, all that I need is in this one program meaning I don't have to open a bunch of windows to get what I want. Great programming!” (Frank Doyle)

About FastMaint™

FastMaint is a Microsoft Windows™ based computerized maintenance management software package for small to mid-size maintenance teams. Fast to set up and use, it is an affordable solution for organizations of all sizes.

FastMaint is available in four editions; Basic (single user), Standard (single user) and Professional/ Web (multi-user).

Easy to set task frequency

How much does FastMaint cost?

Prices start at US\$ 495* per copy (Basic edition). A fully functional, free 30-day trial version is available for download.

Certification/ Awards

SMGlobal Inc. has earned **Microsoft's ISV Competency™** for FastMaint in 2006. This is awarded only after products pass Microsoft's certification tests as well as receive positive reviews from customers surveyed by Microsoft.

Network World magazine rated FastMaint as a **Cool Tool** in the July 2002 issue of Network World Fusion.

Need help with maintenance management?

FastMaint can help manage preventive & planned maintenance of equipment and facilities. Improve the quality of maintenance systems while reducing the costs of labor and materials and increasing asset life. An easy to use interface helps users become productive quickly.

Useful features to help you

Track and estimate labor costs, material costs and inventory needs. Import/ export data from comma delimited files/ spreadsheets. Define global or individual working calendars with days off and holidays. Detect schedule conflicts and reduce overtime costs. Plan maintenance for any given period, print work orders and collect feedback. Use work order history to find problem patterns and more.

FastMaint comes with a built-in Microsoft Jet™ (Access) database so many third party tools such as report writers, data extraction utilities and so on can extract information and integrate with it.

FastMaint Professional adds multi-user support and the option of using Microsoft SQL Server™ for your maintenance database.

FastMaint Web is the web browser based version of FastMaint that can run on its built-in web server OR on Microsoft's Internet Information Server.

(For a list of major features see next page)

A customer quote

“We are very pleased with your product. I am learning more about its versatility each day. I have been able to see a downward trend in equipment break downs and spare parts usage.”

D. Cook, Maintenance Planner
